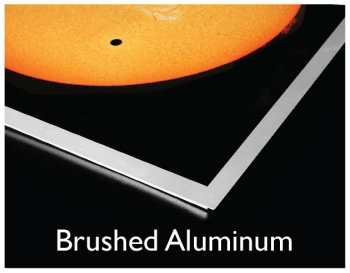
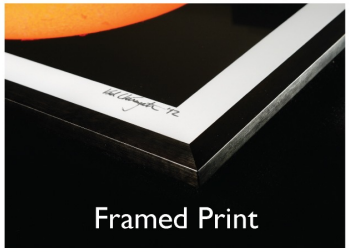
Physics meets Photography

Vedphoto uses cutting-edge photography to channel people's scientific curiosity, produce scientifically relevant exhibitions and fund award-winning scientific research. Purchasing my fine-art prints and products enables this mission, helps us bring science to the public and supports our student internship program. Learn more about my projects, products and galleries online at vedphoto.com and thank you for your support! All products are hand-made and signed by the artist in Palo Alto, CA USA. I use the highest-quality and sustainably sourced archival materials.

Rear-mounted inset or framed aluminum prints are made with a dye sublimation process on sheer-glossy brushed aluminum with a UV curing and protective layer.



Framed luster prints are matted with museum-rag, mounted with linen tape and sealed behind a clearer-than-glass glazing inside a stained solid wood frame of choice.



Exhibition poly-cotton canvas gloss print with polymer coating and UV sealant traditionally stretched over desiccated solid pine or basswood frame.

Traditional Japanese silk brocade scroll with matte print on archival rice paper mounted with silicone backing. Comes in tung wood storage box.
